Career Summary

Full-stack engineer who builds and ships products end-to-end. I built HireJourney solo, an AI career platform live with 50+ users, handling backend, payments, and AI orchestration from zero to production. I've also shipped systems on teams, built a crypto trading bot that pulls live market data into LLM-generated trading signals, and built Flutter apps for fintech and healthcare clients. I work across React, TypeScript, FastAPI, PostgreSQL, Redis, and Flutter, and I'm at my best owning a system end-to-end and getting it in front of real users fast.

Core Competencies

- Backend:** Python (FastAPI, Django, Flask), Node.js, Java (Spring Boot).
- Frontend:** React, Next.js, TypeScript, TailwindCSS.
- Mobile:** Flutter (Android & iOS).
- AI / ML:** LLM Integration & Orchestration (Claude, GPT, Gemini, DeepSeek via OpenRouter), Prompt Engineering, Multi-Model Routing.
- Databases & Infra:** PostgreSQL, Redis, MongoDB, Supabase, Docker, Fly.io, Vercel.
- Payments & Auth:** Paystack, Lemon Squeezy, JWT/OAuth2
- Tools:** Git, Postman, Swagger/OpenAPI.

Professional Experience

HireJourney - hirejourney.xyz
Full-Stack Software Engineer
Built and shipped a full-stack AI-powered career platform solo from zero to live users across Nigeria and internationally.

Lagos, Nigeria
Oct 2025 - Present

- Engineered and maintained 40+ production RESTful APIs with FastAPI powering auth, ATS analysis, resume processing, job tracking, interview simulation, and cover letter generation across web and Chrome extension clients.
- Built asynchronous AI orchestration pipelines integrating OpenRouter LLM APIs for job fit scoring, ATS analysis, and dynamic interview generation tailored to specific job descriptions.
- Designed authentication architecture with JWT access/refresh rotation, Redis-backed token blacklisting, and rate limiting for secure concurrent access.
- Processed 1,000+ resumes and generated 1,500+ ATS reports through optimized backend pipelines and query tuning.
- Shipped a Chrome Extension enabling one-click job description extraction across 5+ major job boards (including LinkedIn, Indeed, and Glassdoor), feeding directly into the AI analysis pipeline..
- Implemented dual payment infrastructure (Paystack + Lemon Squeezy) with automatic IP-based routing and webhook handling for local and international checkout.
- Built and deployed Dockerized infrastructure on Fly.io and Vercel with automated CI/CD.

Meerge Africa
Backend Developer
Backend engineer responsible for building and scaling APIs for a logistics and payment platform supporting delivery agents and financial transactions.

Lagos, Nigeria (Remote)
May 2025 - June 2025

- Built and maintained 15+ RESTful APIs for orders, payments, and KYC verification.
- Integrated Paystack API with custom failover logic, achieving a 99.9% transaction success rate.
- Reduced DB query latency by 30% using indexing and Redis caching.
- Designed OTP verification (email/SMS) with reliable delivery across production traffic.
- Wrote automated tests (Pytest/Postman) and set up CI/CD to keep features stable while moving fast.

3ribe
Mobile Developer Intern
Worked on a cross-platform fintech mobile application focused on performance and usability.

London, United Kingdom (Remote)
February 2025 - April 2025

- Improved image upload performance by 30%, reducing loading time and improving user experience.
- Fixed layout bugs and inconsistencies, improving UI compatibility across 95%+ of supported devices.
- Consumed and integrated backend APIs for user authentication, transactions, and profile management.
- Worked closely with the mobile engineering team in agile sprints to ship customer-facing features.

Semicolon Africa

Software Engineering Fellow

Lagos, Nigeria

February 2024 - February 2025

Built backend systems and APIs for multiple web and mobile products as part of a cohort-based engineering fellowship (Cohort 20).

- Designed and implemented backend architectures and REST APIs for 4+ applications across web and mobile.
- Mentored students from junior cohorts on backend fundamentals and coding practices.
- Led sprint planning and code reviews for my team, improving code quality and delivery consistency.
- Implemented automated testing pipelines that reduced regressions and improved system reliability.

Freelance Full-Stack Developer | Self-Employed

January 2023 – Present

Delivered end-to-end software solutions for international clients across e-commerce, fintech, and healthcare sectors.

- Developed booking platforms for UK-based beauty professionals, increasing appointment conversions and reducing manual scheduling overhead.
- Built a TreeLink-style creator portfolio platform generating consistent monthly traffic.
- Built core screens and features for a Flutter-based fintech loan app under NDA, integrating Smile ID for KYC and Paystack for in-app repayments, and connecting the full loan flow (application, disbursement, repayment) to backend APIs.
- Built the frontend for a Flutter-based healthcare mobile app under NDA, translating Figma designs into a fully responsive UI.

Selected Projects

CommsBridge – AI Assistive Mobile App - [GitHub](#)

AI-powered application designed to help hearing-impaired users understand conversations and detect environmental hazards. I implemented speech-to-text transcription, multilingual translation, and AI summarization, improved audio processing pipeline achieving 40% faster processing.

Tech-Stack: Java, Spring Boot, Flutter, Python, FastAPI, TensorFlow, Gemini, Cloudinary, MySQL.

Shoe-store E-commerce Platform - [Live](#)

Full-stack e-commerce platform built for a footwear retailer, replacing a manual/legacy workflow with a customer storefront and admin dashboard for inventory, order, and product management.

- Client-confirmed improvement over previous system, particularly for day-to-day order and inventory handling. .

Tech-Stack: Next.js, TypeScript, NeonDB, Drizzle ORM, Cloudinary, Paystack.

Crypto Signal Bot - Telegram

Automated trading signal bot combining technical and fundamental analysis, ingesting live market news and delivering real-time signals via a Telegram bot interface. Actively in use, generating signals in production.

Tech-Stack: Python, FastAPI, Pandas, CoinGecko API, Binance Funding API, ForexFactory, CoinTelegraph, CoinDesk, OpenRouter(Claude), Redis, NeonDB, Docker, Flyio.

Trading Journal - Personal Tool

A trading journal that tracks trades by session (converted to local time), calculates profit/loss and expected risk-to-reward per trade, and generates analytical reports on trading performance over time.

Tech-Stack: Next.js, Supabase, Drizzle ORM, Vercel.

A few of my other builds. More projects and write-ups on my [portfolio](#)

Education/Certification

Lagos State University - B.Sc. in Business Administration

Lagos State, Nigeria

Henley Business School - Business Management Certificate

Greenlands, United Kingdom | Completed May 2025
